Experience

Software Engineer – Trading Systems, Syphonix, London, UK Apr. 2025 – Present

- **Built trading-support and observability tooling** for a high-volume trading platform (~\$1B daily), automating FIX log analysis for fast incident diagnosis and contributing backend components to low-latency trading services.
- **Managed DevOps and cloud operations** across CI/CD pipelines, multi-environment releases, and infrastructure automation, leveraging proactive monitoring to ensure system high availability.
- **Designed and built AI-powered internal tools** and spearheaded workflow improvements by collaborating with trading operations, accelerating the company's transition toward AI-native engineering.

Summer Research Intern, Academia Sinica – Taipei, Taiwan Jul. 2022 – Aug. 2022

Natural Language Processing and Sentiment Analysis Lab

- Collaborated with a research team on an AI-Automated Training System for Figure Skating, concentrating on improving temporal video alignment by incorporating posture features

Education

Imperial College London, UK Sep. 2023 – Sep. 2024

MSc in Computing, with Distinction

- Coursework: Software Systems Engineering, Machine Learning, Computational Finance, Distributed Systems
- Master Thesis: “Robust Time Series Causal Discovery for Agent-Based Model Validation”

National Tsing Hua University, Taiwan Sep. 2018 – Jun. 2022

BS in Interdisciplinary Program of Engineering, (Top 4%, Dean's List 2x)

- Specialised in Electrical Engineering and Power Mechanical Engineering with a focus on Electrical Control
- Awards: 2nd Place, College of EECS Project Competition

Certifications

CFA Institute – Passed Level I of the CFA Program Aug. 2026

AWS DevOps Specialization, Meta Front-End Developer (Coursera)

Projects

AO Quant: Validated Algorithmic Trading System Jul. 2026

- Built a Python trading system sharing one code path for backtest and execution.
- Gated strategies behind statistical validation (walk-forward permutation tests, deflated Sharpe, PBO).

VCDF: Validated Consensus-Driven Framework for Causal Discovery Oct. 2024 – Sep. 2025

- Developed VCDF, a method-agnostic verification layer evaluating temporal causal stability, achieving 0.08–0.12 F1-score gains for VAR-LiNGAM across fMRI and IT-monitoring benchmarks.
- Authored the peer-reviewed paper: **Yu, G., Guo, C., & Luk, W.** VCDF: A Validated Consensus-Driven Framework for Time Series Causal Discovery. In *Proceedings of PAKDD 2026*.

IMU-Based Motion Analysis System - NTHU Reliable Computing Lab Jan. 2021 – Jan. 2022

- Developed a motion-analysis system using 6-axis IMU sensors to reconstruct football kick trajectories.
- Achieved low RMS error in velocity and position; Authored the peer-reviewed publication: **Yu, C.; Huang, T. Y.; Ma, H. P.** Motion Analysis of Football Kick Based on an IMU Sensor. *Sensors* 2022, 22, 6244.

Technical Skills

Programming & Tools: Python, C++, Java, React, SQL, Git, Verilog, MATLAB, AI-Assisted Dev (Claude)

Cloud & DevOps: AWS (EC2, S3, Lambda), Azure, CI/CD, Docker

Extracurricular Activities

Co-founder, Britween – London, UK Aug. 2025 – Present

- Co-founded a non-profit community for Taiwanese students and professionals in the UK, organising 13 events for 400+ attendees, including networking events, festivals and study-abroad talks.
